

The IACLE CASE REPORTS Series is a growing collection of interactive, illustrated case reports intended for use as a contact lens teaching resource by educators, practitioners and students. Applications include: introducing lectures on related topics, assessing knowledge imparted by a lecture, the basis of a tutorial, a self-paced student learning aid and continuing professional education.

The series includes colour illustrations, videos, and useful references to the IACLE Contact Lens Course and other resources and all include interactive multiple-choice questions that guide the user towards the correct answer with explanations at every step. Progression through the report is not possible until a correct answer is achieved. Each report can only be navigated using the on-screen 'buttons' provided.

The case reports are based on materials supplied by contact lens educators from around the world. As the series grows, topics will move from the current introductory and intermediate levels to more advanced topics. All educators are invited to supply details of cases they believe have educational value. They are in Flash format and can be easily viewed - just as you would a PowerPoint presentation.

These are available to members through IACLE Resource Centres. Resource Centre Coordinators are supplied with a username and password to access a secured area of the IACLE website, where they can download a copy of the IACLE Case Reports. Resource Centre Coordinators without internet access have these available on CD.

Each month a Case Report will be made available. Members will receive email notification at the time.

If you are not an IACLE Resource Centre Coordinator and would like to obtain a Case Report(s) you can purchase them for US\$20 each. These will be provided on CD. Complete and submit an order form. Go here for further information and an order form:
