

The CCLRU/LVPEI Guide to Corneal Infiltrative Conditions - seen in contact lens practice, sponsored by CIBA Vision, grew out of research into contact lens related inflammation over the last 10 years at CCLRU and LVPEI.

Input was also obtained from key contact lens researchers from around the world. The guide covers a range of conditions, including microbial keratitis, contact lens-induced peripheral ulcer, contact lens-induced acute red eye, infiltrative keratitis, viral keratoconjunctivitis, superior epithelial acute lesions, asymptomatic infiltrative keratitis and asymptomatic infiltrates.

Each condition is described and pictured, and information for each includes the severity rating, incidence, symptoms, signs, aetiology, risk factors, and course and management.

The guide is available to contact lens practitioners throughout the world to provide a reference for their practices and assist in the treatment of patients. The guide is available in English, Spanish, French and German.
