

The IACLE Image Collection is a selection of more than 100 images from the larger IACLE slide collection contributed originally by IACLE members over many years.

The images appearing on the CD were selected for their educational value, their quality, and/or their rarity. All images are scans of the photographic originals. Most obvious artefacts, e.g. dust, lint, scratches, unwanted specular reflections, etc. have been removed using a photo/pixel editor.

A PowerPoint presentation previewing all images is included on the CD. The presentation includes the slide file's ID, the photographer's name, and the condition(s) depicted. In some cases, the pertinent or subtle features of interest in the images are highlighted or arrowed. These additions appear in the presentation only and are not included in the image files (JPGs).

The images in the presentation are arranged by topic under broad general headings, e.g. Corneal Conditions, Tears, RGP Lenses, Bifocals, etc.
