

Technical Training Program

IACLE has developed the Technical Training Program - an independent study program that is a practical alternative to standard classroom training. The Program is contained on six compact discs featuring dynamic video segments and graphics to engage and excite the user.

This self study educational program can be utilised by all independent users, including academic students and entry-level employees with no technical experience. Independent learning makes it possible for the individuals to study at their own pace and in their own time, reviewing the materials as much or as little as needed. The flexibility of the program allows for independent training in remote locations or in a more traditional classroom setting.

The program provides technical background, and assumes the user is starting with little or no knowledge of the eye or contact lenses. Dynamic video segments, audio narration, and highly enhanced graphics screens engage the user when delivering the educational materials.

Each CD-ROM contains essential background material about the eye and contact lenses, and is broken down into one-hour learning segments with a question and answer summary following each section.

The program consists of the following six chapters:

- Chapter 1 - The Eye
- Chapter 2 - Introduction to Soft Contact Lenses
- Chapter 3 - Soft Contact Lens Fitting
- Chapter 4 - Toric Lenses
- Chapter 5 - Complications in Contact Lens Wear
- Chapter 6 - Soft Contact Lenses for Presbyopia

The interactive videos in each chapter commands the users attention and provides an enjoyable and engaging learning format, which is followed by the question and answer forum at the end of each chapter to reinforce the material.

Self-paced, distance learning is in high demand in today's busy and competitive educational environment and IACLE is proud to be the provider of this state-of-the-art educational format.
