

IACLE has had a very positive response and many compliments on the Slit Lamp Biomicroscopy Chart.

This hand-held chart shows several methods of illumination which are identified for the student or educator. The excellent photograph, donated to IACLE by Dr. Charles McMonnies, has been numbered and detailed so as to demonstrate six different illumination techniques.

We hope you will find this tool to describe illumination methods in a direct, simple, and straightforward way to be a valuable tool. When teaching Biomicroscopy (or learning as a student) this photo-card can be a great visual resource.

This chart is available in English, Chinese and Spanish.

Here is note from one of our members praising this resource:

*"Dear IACLE,*

*The slit-lamp illumination poster that was included in a recent IACLE mailing was OUTSTANDING!*

*The photo is just what we have been looking for. Most "prints" do not show the subtle detail and slides, while much better, are not easy to demonstrate in clinic. Is it possible to get further copies of this poster to set up in our procedures laboratory?*

*Signed*

*William Edmondson, OD, Wes DeRosier, OD
